How to read your results

Your report summarizes how you've performed against other candidates, with a similar education and/or professional background. This insight will provide you with an improved understanding of your stengths, as well as areas for potential improvement. You'll also get a better idea of what these assessments actually look out for.

All results detailed in this report are based on the answers you provided, whilst completing the cognitive assessments as part of your application.

UBS Feedback Report: 5405859_322615BR

Inductive Reasoning

What does this test measure?
The task is to find out rules and interrelations in a given pattern and to apply these rules to the following ones. Therefore, the test measures the ability to draw inductive logical conclusions. High scores indicate the ability to analyze information and data bases and to recognize the rules behind them.

How to interpret your result
Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:
Compared to other participants, it is **much easier** for you to handle the tasks in this test successfully.

What is your processing style like?
In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 29
Number of questions correctly answered (accuracy): 28

Your processing style can be characterised as follows:
Your completion of the test was **extremely fast**, this means that you completed more tasks in the default time than most other participants. At the same time you were **extremely accurate** which means that compared to other participants, you answered more items correctly.

Verbal Reasoning

What does this test measure?
The task is to draw logical conclusions from complex verbal information. In addition, this test measures the ability to purposefully retrieve the relevant information from a large amount of data. High scores indicate the ability to accommodate complex information under time pressure fast and efficiently and to distinguish it from irrelevant information.

How to interpret your result
Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:
Compared to other participants, it is **much harder** for you to handle the tasks in this test successfully.

What is your processing style like?
In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 18
Number of questions correctly answered (accuracy): 6

Your processing style can be characterised as follows:
Your completion of the test was **extremely fast**, this means that you have completed more tasks in the default time than most other participants. However you tended to be **inaccurate** which means that, compared to other participants, you made more mistakes.
